

# TEE IT UP!

## JASC Positional Tees Featuring Integral High-Temperature Metal-to-Metal Seal Technology Replaces Elastomeric Seals

- Eliminates leaks associated with high temperature O-ring degradation
- SAE J1926 compatible for purge air, liquid fuel check valves and nozzle connections
- Multiple make-and-break capability provides years of maintenance-free service
- Engineered for continuous service in both high ambient temperature and high pressure environments
- Adjustable orientation for easy connection interface
